DIY Photo Coasters

What You'll Need

- Small foam paint brushes
- Ceramic tiles (inexpensively found at a local building supply)
- Mod Podge
- 4 × 4 Coaster print outs
- Waterproof acrylic sealer spray (Note: if you are using different brands of products, the results may vary.)
- White acrylic craft paint
- Felt, fleece or cork scraps for backing, plus hot glue to attach the backing

Instructions

1. Paint the rough, unfinished sides of the coasters. Once the tile has dried, grab your photos.

2. Trim each photo into a square shape to fit your tile.

3. Apply Mod Podge to backside of trimmed photo. Then place photo on tile and press down. Allow to dry completely.

4. Once dry, apply a layer of Mod Podge to the top of the photo. Use even left-to-right strokes. (As always with Mod Podge, lines will show.)

5. Allow to dry completely. Repeat with two more layers of Mod Podge (allowing each layer to dry completely before applying the next).

6. Apply acrylic sealer spray to front side of coaster. Apply one to three layers of spray, allowing it to dry. This step, depending on your choice of product, creates a smooth surface finish.

7. Cut felt of your choice and glue to the back of the coaster. This step is important to prevent wooded or glass surfaces from being scratched by the tile.
